

Dear Marla, Chad, and Joseph,

Thanks for taking the time to discuss the proposed draft for the Medical Marijuana Program on the phone yesterday.

The topic of our discussion yesterday was in regards to Section 109 (b). These proposed changes will ensure that there will be no conventional pesticides, insecticides, fungicides, miticides, algaecides will be used in the production of medical marijuana that may be harmful to the end user, yet allowing the cultivator a method for control of plant pests through organic certified products. All products certified for organic production are listed on the OMRI.org web site.

The proposed changes will state:

“For the use of suitable rodenticides, insecticides, fungicides, miticides, algaecides, fumigating agents, cleaning and sanitizing agents by the establishments that are designed to prevent the contamination of equipment, components, medical marijuana product containers ~~or medical marijuana products~~. An establishment shall not use rodenticides, insecticides, fungicides, miticides, algaecides, fumigating agents, cleaning and sanitizing agents unless the products are registered and used in accordance with Federal Insecticide, Fungicide and Rodenticide Act (7 U.S.C 135) An establishment shall not use any pesticide, insecticide, fungicide, miticide, algaecide on any medical marijuana plant unless the product is a registered as an OMRI certified product.”

The new additions to the proposal are in red. Wording with lines through should be taken out.

Sincerely,

Eric Edgerton
